Monopoly 2.0

The rules of Monopoly 2 are the same as in the original game but with the following exceptions.

Win Condition

The game is won, when a player gains 5 monopolies or is the only player remaining, although that is an unlikely scenario to occur. In the rare event that multiple players gain 5 monopolies simultaneously, the player with the highest total value of all assets wins. If those are equal, it is a draw between those players.

This guide is written with the classic Monopoly in mind. Terminology and units will change depending on the version you are

playing. This is a work in progress and changes will likely be made, if I can get people to play-test with; playing Monopoly is generally not

something a lot of people care to do.

Money

All monetary values are rounded up to the nearest £5. 1 Thus when the starting money is dealt to players an additional £5 note can be given instead of 5 £1 notes, as they are no longer needed. 2

Buying Properties

Players can not purchase any properties by landing on them, unless a Chance or Community Chest card states that they can. Auctions also do not exist.

The title deed cards are shuffled and placed face down on the board. The top 4 cards are turned over and placed face up on the board. During a player's turn, they can choose to purchase at most one of these face up properties for the price printed on the board. When one is bought, another title deed is turned over to replace it, until the deck is empty.

Movement and Dice Rolling During a player's turn, they must roll 2 six-sided dice, then they choose a player to move that distance along the board. The

player being moved receives any effects of the space they land upon. The same player must not be moved by the dice two turns in a row, however they may be moved by other means. If no player is eligible to move, no player is moved. 3 Rolling a double has no effect. **Chance and Community Chest Cards**

When a player lands on a Chance or Community Chest space, all players draw one of that card from the deck. If there aren't enough cards in a deck for all players to draw at once, the discard pile is shuffled; enough cards to bring the number of remaining cards up to the number of people trying to draw are taken from the shuffled discard pile and put into the deck. The deck is shuffled; the cards are drawn; and the remaining shuffled discarded cards become the new deck. This is so that it can't be known who's received a recycled card from the discard pile.

shown to others until they are played. During a player's turn, they can activate any number of Chance or Community Chest cards from their hand on any player. The player they choose to play the card on receives that card's effects. Chance and Community Chest cards have no value and must not be exchanged, gifted, or sold. 4

Chance and Community Chest cards do not have to be used immediately. They are kept by players and do not have to be

Buying Houses and Hotels

A single House or Hotel purchase affects an entire Monopoly. Houses and Hotels are placed in the middle of a run of properties

to indicate that they apply to the entire monopoly. 5 **Trading**

owns from them for its board price. 6 7

currency.

Re-selling and Payment Owned property and buildings can not be sold back to the bank. Buildings and property are treated as an indivisible units of

There is no direct trading or haggling. During a player's turn, they may buy any un-monopolised property that another player

If a payment is to be made, a player can play with a combination of cash and properties. Change can be given by the payee (bank or player) up to the amount of money given in the transaction. ⁸ If a payer overpays by this method, it does not matter as far as the rules are concerned

Any properties returned to the bank are placed at the bottom of the title deed deck.

Properties can not be exchanged in this way if any buildings are built upon them, but they can be exchanged if they are part of a monopoly.

Only in the event of making a payment can buildings used in a transaction. All buildings are worth the amount used to buy them.

When exchanging a Hotel, it can be exchanged for Houses on that monopoly at the same time. The value of a hotel equals (5 - the_number_of_houses_replacing_it) * the_value_of_a_house_on_that_monopoly. 9

Jail

When a Hotel/House is received in a payment, it must be exchanged with the bank for the amount of money that it is worth. 10

Players can only be sent to Jail by landing on "Go To Jail" or by having a "Go To Jail" Chance or Community Chest card played

When in jail, a player will still be paid money by every usual means, however:

 Their token cannot be moved while in prison; they can not roll the dice for movement;

- they can not play Chance or Community Chest cards, except for a "Get out of Jail Free Card"; • they can roll two dice on their turn with the effect that if they match, they become "Just Visiting" and can continue their
- turn like a normal turn:
- at the end of a second turn in Jail, they become "Just Visiting".

Aspects of the game that would happen eventually but would take a long time now take place quicker:

These ideas are all untested so I can only speculate about whether they'll improve the game.

- None of these effects apply while "Just Visiting".
- Player's can not pay money to leave Jail. Mortgages

Chance and Community Chest cards are played throughout the game.

Aspects of the game that weren't very strategic now require more thought:

Properties can't be mortgaged.

Technically I don't have to mention that nothing happens when you land on Free Parking as it's already an official rule. I don't think all money paid by Tax, Chance, and Community Chest should put on Free Parking and collected by anyone who lands on

Free Parking

Summary of Reasoning Some reasoning is provided in footnotes, but here is a general idea about what I was trying to achieve. The game of Monopoly needs to be improved by: * it ending sooner; * it being more strategic.

it because there is too much control of movement, it will be too game-swinging if someone receives a payout due to how many

· buying buildings on all properties in a monopoly; · having all the properties bought; · all properties being grouped into monopolies;

applying the effect of a Chance or Community Chest card the moment it was picked up

properties changing ownership. 11

- all movement being random o not controlling what you have the chance of buying (we can ignore auctions in that fact because everyone knows
- allowing them to happen is a bad thing); not controlling the likelihood of your properties being landed on

Potential Changes to the Changes

a larger monetary buffer.

 Make Houses and Hotels much cheaper perhaps something like 20, 40, 60, 80 instead of 50, 100, 150, 200. Then when a property is used in a transaction, the value of its buildings could be taken into consideration, and then the complicated rules around selling buildings but only in certain scenarios won't be a thing. The problem with this is that it might

discourage buying houses because you've got bigger indivisible units, so there will be a greater loss if you don't maintain

A building is worth however much it's worth on the property they put it on. If they don't have any, they get the money for it from the bank the way they do now. The problem with this could be that the receiver has to decide how much it's worth,

making it harder and take longer for the payer to decide in what materials they'll pay. **Footnotes** 1. If it wasn't obvious, rounding a multiple of 5 up to the nearest 5 keeps it the same. ← 2. How useful were they ever? They've just been a nuisance all this time. I thought to get rid of them before remembering

John Green's tirade against pennies. Money exists in order to facilitate commerce, but Monopoly's £1 note doesn't do that

because you paid in part with money. ←

- it dificilitates it. If we want Monopoly to last a reasonable amount of time we have to look at the opportunity cost of things players have to do, and every moment people spend fiddling with £1 notes or exchanging 5s for them at the bank is a moment for which the game drags on. € 3. It is beneficial to move yourself to increase the frequency with which you pass Go. And it is beneficial to move other
- players when you know that they will land somewhere detrimental to that player. ← 4. I'm not 100% sure about the fact that they can't be exchanged. But I am firm about them having no value. There is no bartering with other player's built into this game, so allowing this would be the only exception. ←

5. I'm not certain whether instead each property should gain a House/Hotel when one is bought, instead of putting them in the middle. The difference here is that this alternative will run out of houses or hotels if too many are built. However it is

much fiddlier to add and remove them as needed, which happens frequently. 6. I feel like buying it for double the price makes it too difficult to complete monopolies in a timely manner. 150% of the board price could be considered. ←

7. A lot of people will think this is an awful change because that's kind of what the game was largely about. However the

problem is that once a property is bought, its value sky-rockets because everybody knows how much they are worth later

on in the game, and so there is a lot of refusal to trade and shouts about how "you mustn't let them have that or they're guaranteed to win". People are stubborn especially when they are keen to win. This wastes time and is not fun for other players waiting for their turn. € 8. This one might take a little bit of thinking. It basically means that you only get any monetary change if you paid with

money. It's written so that you don't pay a £300 sum with a £400 property and a £5 note and demand £105 change

9. There should always be at 4 houses to replace a Hotel in the box because monopolies share buildings and fewer are

11. A lot of people will think this is an awful change because that's kind of what the game was largely about. However the

- needed. But this information will be crucial if the rules change such that all Houses can be used up. ← 10. If it wasn't clear: This money will not be given in change and it can cause a payer to over-pay. ←
